

Assessment of Teaching Block 2: Topological Data Analysis

2022-2023

- Short exercises will be proposed every week. Answers to short exercises should be submitted in pdf format through Campus Virtual before the next class. **In order to pass Block 2, at least half of the short exercises have to be solved and delivered.**
- Longer exercises will be proposed occasionally. Answers to long exercises are to be delivered before December 20. **In order to obtain a high mark for Block 2 (greater than 8/10), at least one longer exercise must be delivered.**
- If an exercise has been solved as a joint work of two or more students, this fact should be stated and their names be mentioned. Although joint work is accepted, the final marks may depend on evidence of individual performance.
- Tentative marks will be proposed by the end of the lecturing period, and additional tasks may be delivered during January.
